

Comprehensive **STC** Children's Products Testing Service ... Helping **Manufacturers** get into the **Global Markets**

When it comes to children's products, safety has long been parents' concern and, in recent years, environmental friendliness has been added to the list. Stringent requirements for children's products have been enforced in countries such as the United States, Europe, Japan and China. Manufacturers must ensure their products fulfil the relevant requirements for sale in the target markets.

As an expert in toys and children's products testing, STC has received accreditation from various national and international bodies to perform testing on a wide range of children's products. We offer a convenient one-stop service for manufacturers to get access to all major markets in the world, mitigating your risk of product recalls and associated financial losses while speeding your time to market.
